

INSTRUCTIONS

Wireless Internet Step 1

Windows 8 and 10

Click on the wireless network connection icon in your notification area.

Mac OS X

Click the “Wi-Fi” menu bar icon located at the top of your screen (if “Wi-Fi” is off, select “Turn Wi-Fi On” and then click the “Wi-Fi” icon again).

Tablets, smart phones, Linux, other operating systems or devices

Using the software provided by your manufacturer, follow the instructions in step 2.

Step 2

Select the wireless network to which you want to connect and then click Connect.

Open your browser to a public web page and follow the instructions.

Wired Internet Step 1

Windows, Mac and Linux

Verify that the network cable is properly connected to your computer (please note that a network cable is different from a phone cable).

Step 2

Open your browser to a public web page and follow the instructions.

Troubleshooting tips

Make sure your network card or wireless switch is enabled.

If you must connect to a VPN before you can access web pages, contact our technical support hotline.

Certain personal firewalls and Internet security programs can interfere with your connection. In certain cases, you may need to deactivate them.

If you don't see the activation page to start your connection, try accessing a non-encrypted website (such as <http://www.intello.com>) with your favorite browser.
